ENTERPRISE INTELLIGENCE LAB

Enterprise AI Governance Framework

Framework brief based on the current flagship framework portfolio and Enterprise Intelligence Lab positioning.

Framework | Version 1.0

A brand new framework brief derived from the policy, Enterprise Intelligence Lab collection, control of framework, portfolio and positioning language across enterprise AI systems.

Executive summary

A formal governance reference model for policy, risk review, evidence collection, control ownership, and lifecycle accountability across enterprise AI systems.

Overview

A governance model that treats control evidence as part of enterprise architecture and responsible AI delivery.

Problem solved

Many enterprises treat governance as documentation rather than system design. This framework makes governance operational by binding policy, controls, and technical evidence together.

Tags

Governance, Policy, Compliance

Business outcomes

- Improves auditability and policy execution
- Reduces compliance friction between oversight and delivery teams
- Makes governance measurable across the AI lifecycle

Implementation approach

- Define policy domains, control families, and evidence expectations
- Map governance checkpoints into architecture and workflows
- Operationalize continuous review with measurable control coverage

Industry relevance

Financial Services, Healthcare, Government, Critical Infrastructure

Reference architecture model

The framework diagram below reflects the current public framework model on the site and shows the conceptual layers and signals associated with this asset.

Element	Content
Core	AI Governance
Layers	Policy Logic, Control Families, Evidence Trails, Review & Escalation
Signals	Risk, Audit, Accountability
